

SERUM 2000®

TINTADD BLUE™

INDICATOR

THE SOURCE FOR REMEDIATION SOLUTIONS

DESCRIPTION:

Serum TintAdd Blue is designed to add an indicator color to our **Serum 2000** long term protectant. It will add a blue tint to the normally clear **Serum 2000**. It will give the applicator a visual to enable complete coverage of surfaces with the tinted **Serum 2000**.

Serum TintAdd Blue also is designed to enable the property owner to visually detect something has been applied to the surfaces that our authorized contractor has just cleaned and mitigated using **Serum 1000**.

Sometimes property owners prefer and ask for a Warranty. Our authorized contractors would then notify us of the opportunity to offer a warranty and we would discuss this with the authorized contractor. If conditions at the place to be warranted meets certain criteria, we would approve the job for warranty and send the necessary documents to the authorized contractor to accomplish the protocol to support the warranty. We do require **TintAdd Blue** be incorporated into the **Serum 2000**, when practical, as an indicator that **Serum 2000** has been applied. Once the protocol has been completed, the authorized contractor would obtain a third party environmentalist to inspect and clear the property for re-occupancy. The authorized contractor would take a number of color pictures to record the condition of the space at that time and forward these and a copy of the environmentalist's test report along with the clearance letter.

The **TintAdd Blue** when applied to cleaned surfaces, gives our authorized contractors a visual that **Serum 2000** was applied and long term gives them an indication of protection survivability. When a water intrusion occurs in the future, it takes approximately 30 days for the blue indicator to be washed off the surface. In order for the property owner to support our warranty, they must report water loss intrusions within seven (7) days of occurrence.

DIRECTIONS FOR USE:

Pour one (1) quart (32 ounces) of **TintAdd Blue** per five (5) gallon pail of **Serum 2000** and stir with a paint stir stick. The mix rate is 1:20 so if you would like to mix 1 gallon you would add 6.5 ounces of **TintAdd Blue** to each gallon of **Serum 2000**. The tinted **Serum 2000** may be applied using a pump up sprayer or airless paint sprayer fitted with a .411 spray tip in the paint spray gun.

PRODUCT PART # 5-730-12

CAUTIONS

Keep out of the reach of children. Do not ingest. When not in use, keep container closed. Do not dispose of unused portions into water ways, creeks, rivers, estuaries or oceans. Do not return unused portions into original container. Do not reuse empty container. Clean up using dish soap and water.

Our **Serum System** was used on **Extreme Make Over - Home Edition** March 11, 2007 on a house in Lake Arrowhead, Ga.

The newly constructed house stood for over 14 months unfinished because of family tragedy.

The front foundation did not have a french drain to divert water. Water ran under the front footing and was trapped in the crawl space by the back foundation wall. There was no vents in the foundation to exhaust the moisture. Moisture intruded from the sides and top of the structure as well.

As a result of these conditions, the crawl space was full of water and that contributed to a high moisture level to the interior of the house. The roof only had plywood sheeting with no tar paper. The house has two 2700 sq. ft. two stories with bonus rooms in the cathedral ceiling and a 2700 sq. ft. crawl space. Total area for remediation about 42,400 sq. ft. of sprayable area and only 24 hours to accomplish the job! The job was finished in less than 21 hours with no return of unsightly stains or objectionable odors. Oh and the house was totally uncontained the entire time during cleaning and testing!!! The house had no windows or doors.

We passed clearance testing with a 99.9% reduction in organic mass.
